Professional Summary

Cybersecurity and Cloud Automation enthusiast with hands-on experience in AWS infrastructure, Splunk SIEM environments, Terraform automation, and security monitoring. Strong understanding of networking fundamentals, SOC operations, threat detection, and log analysis. Experienced in building automated cloud workflows, security testing labs, and detection validation using Splunk Attack Range. Passionate about security monitoring, incident analysis, and infrastructure automation in modern security operations environments.

Technical Skills

Cybersecurity:	SOC fundamentals, Security Monitoring, Incident Analysis, Threat Detection, Log Analysis, MITRE ATT&CK basics, Security Alerts Handling
SIEM / SOC Tools:	Splunk SIEM, Splunk Enterprise Security (ES), Splunk SOAR, Splunk Attack Range, Windows Event Logs, Linux auditd, Log Correlation, Detection Rules, Security Event Monitoring, SIEM & SOAR Workflow Automation
Networking:	TCP/IP, DNS, HTTP/HTTPS, SSH, VPN, Network Troubleshooting, Firewall concepts, IDS/IPS fundamentals, Port analysis
Cloud & Infra:	AWS (EC2, Lambda, API Gateway, CodeBuild, SES, DynamoDB, SSM, IAM), Cloud Infrastructure Automation
Automation:	Terraform, Ansible, Selenium, Infrastructure as Code (IaC), Configuration Automation
Programming:	Python (boto3), YAML, JSON, Git, REST APIs, HTML/CSS, QuickChart/SVG
Security Tools:	SNORT (IDS), OpenVPN Access Server, Nginx, Linux Security Tools
Security Domains:	SIEM, SOC Operations, MSSP environments, Pentesting fundamentals, Threat emulation, Security Monitoring

Security Knowledge

- Understanding of SOC workflows including monitoring, triage, investigation and alert handling
- Knowledge of SIEM log ingestion, parsing, correlation and detection rules
- Familiar with MSSP environments and multi-customer monitoring concepts
- Basic knowledge of network security tools such as IDS, IPS, Firewalls and VPN
- Exposure to MITRE ATT&CK techniques and security attack simulations

Soft Skills

Adaptive, Self-Motivating, Teamwork, Troubleshooting, Clear Documentation

Projects

Splunk Attack Range Automation *2025*

Developed an automated Splunk Attack Range using Terraform and Ansible to simulate adversarial attacks and validate SOC detections. Integrated syslog-ng, Windows Event Logs, and Linux audit logs into Splunk to evaluate real-world detection coverage and logging reliability.

SIEM & SOAR Workflow Automation (Splunk + Active Directory) *2025*

Built a complete SIEM and SOAR integrated SOC lab by deploying Splunk Enterprise with Active Directory environment. Ingested Windows security logs into Splunk and developed brute-force detection use cases using correlation searches and alert rules. Designed and implemented automated incident response workflows using Splunk SOAR playbooks to simulate real-world SOC operations and MSSP environments.

EC2 Quota Checker (AWS Lambda Automation) *2025*

Built a Python-based Lambda solution to monitor EC2 service quotas across regions, storing data in DynamoDB and sending automated SES HTML reports with embedded QuickChart/SVG analytics. Implemented threshold-based alerts and optimized SES templates for Gmail/Outlook compatibility.

Terraform + Lambda + CodeBuild EC2 Provisioning Pipeline *2025*

Created an API-triggered automation pipeline where API Gateway invokes Lambda to start a CodeBuild job running Terraform for EC2 provisioning. Added dynamic variables, optional Splunk installation flags, logging, and end-to-end error handling for production-grade deployments.

EC2 Stop/Terminate Automation + Daily Summary Email *2025*

Implemented a Lambda system that automatically stops or terminates EC2 instances based on schedule/rules and sends daily SES email summaries. Handled cross-region operations, missing Name tags, scheduling via CloudWatch, and Python dependency packaging inside Lambda.

OpenVPN Access Server Automation *2025*

Automated EC2 provisioning and OpenVPN Access Server installation using Terraform and Ansible for a complete zero-manual deployment workflow. The system installs OpenVPN via the official script, configures admin credentials, and validates server accessibility post-deployment.

Splunk Pre-Installation & Post-Installation Automation *2025*

Automated Splunk setup on RHEL systems using Ansible, covering pre-install checks (THP disable, ulimits, packages), installation, and post-installation tasks such as app deployment and service validation. Ensured consistent and production-ready Splunk configurations across systems.

EC2 Management Dashboard & Alerts (DynamoDB + Lambda) *2025*

Developed backend automation for managing EC2 instance metadata in DynamoDB and sending client alerts using Lambda + SES. Implemented instance health checks, Name-tag fallback logic, and region-aware notification rules.

SES HTML Email Formatting & Visualization *2025*

Built responsive and client-compatible SES HTML email template systems with embedded SVG and QuickChart visualizations. Resolved formatting issues where styled templates appeared as raw HTML in certain mail clients.

Membership Portal – Community & Benefits Flow *2025*

Developed frontend flows in Next.js for joining community membership and applying benefit discounts with backend AWS API verification. Improved validation, UI flow, and successfully deployed updates to the DEV environment after peer review.

Extend Validity Feature (Next.js UI) *2025*

Implemented an improved Extend Validity feature by moving key actions outside table rows, integrating pricing APIs, and fixing modal/environment issues. Addressed UI flickering and state-handling problems for a smoother customer experience.

EC2 Instance Access UI Enhancements *2025*

Enhanced the Access Instance modal and workflows to improve SSH/RDP usability, including UI improvements and fixes for asynchronous state and rendering issues in Next.js.

API Verification & AWS API Debugging *2025*

Resolved issues where AWS API Gateway endpoints were not triggering correctly compared to local Next.js API routes. Debugged CORS, URL signatures, and request payload handling to restore production API functionality.

Database Encryption Implementation *2024*

Created a secure data encryption mechanism to protect database records against unauthorized access. Designed and implemented the algorithm as a working prototype hosted on GitHub.

Education

Karpagam College of Engineering	2021 – 2025
B.E. Computer Science (Cyber Security)	*CGPA: 7.15*
Malar Matric Hr Sec School	2020 – 2021
HSC	*70.5%*
Sri Ramakrishna Matric School	2018 – 2019
SSLC	*59.2%*

Professional Experience

Softmania Technologies Private Limited *9 Months*

Worked as a Cloud, Automation, and Security Engineering focusing on AWS infrastructure automation, Splunk deployment/testing, and DevOps toolchains. Built Lambda automation (quota checker, EC2 management), contributed to Terraform-based provisioning pipelines, improved frontend flows in Next.js, and supported SOC simulation environments using Splunk Attack Range.

Internship

Coimbatore City Police Commissioner Office *Short-term*

Assisted in cybersecurity tasks including basic forensic data handling, documentation, and exposure to real-world security practices.

Certifications

- Privacy and Security in Online Social Media – NPTEL
- Fortinet Certified Fundamentals in Cybersecurity – Fortinet
- Fortinet Certified Associate in Cybersecurity – Fortinet
