CAREER OBJECTIVE

Motivated Electronics and Communication Engineering student with a strong foundation in **software development, programming, embedded systems, IoT, and AI/ML technologies**(Basics). Seeking an internship opportunity to apply technical knowledge, develop industry-oriented skills, contribute to real-world projects, and gain practical experience across software and hardware domains.

TECHNICAL SKILLS

Embedded
Arduino, RFID, Flame Sensors, Microcontrollers, IoT Basics

Programming
Python, Java, C, C++

Tools & Tech
VS Code, Tinkercad, HTML, Git (Basics)

Libraries
MediaPipe, PIL/Pillow, OpenCV (Basics), NumPy

AI Tools:
Google Gemini, Suno AI, Lovable, ElevenLabs, Prompt Engineering

WORKSHOPS & TRAINING

Hands-on Training on Measuring Instruments 22/04/2025 – 22/04/2025

C++ Programming Workshop - Fundamentals & OOP 11/2023 – 12/2024

Java Programming Workshop - Core Java & OOP Concepts 12/2023 – 01/2024

Python Programming Workshop - Fundamentals & Problem Solving 01/2024 – 02/2025

Embedded Systems with IoT Workshop 26/03/2025 – 26/03/2025

HCL GUVI – AI & Generative AI Training | 15 Days
- Learned AI & Generative AI fundamentals.
- Hands-on with **Gemini, Suno AI, Lovable & ElevenLabs**.
- Gained skills in **prompt engineering and AI-assisted development**.

AI/ML Engineer Intern internship at Ocean Pulse Health, Salem 16/04/2026 – 16/05/2026
16/04/2026 – 16/05/2026
- Developed an **AI-powered research assistant** for academic paper research and study purposes.
- Built a **conversational chatbot** that helps users interact with and understand research papers.
- Worked with **AI, NLP, and information retrieval** concepts.

PROJECTS

RFID-Based Attendance System with Web Interface 10/2025 – 10/2025
- Designed an automated attendance system using RFID cards and a microcontroller for real-time student identification
- Displayed registered user name and attendance status dynamically on a web interface and Eliminated manual attendance marking, improving accuracy and reducing administrative effort
- Technologies: RFID Module, Arduino, HTML, Basic Backend Concepts

Hand Gesture Mouse Control 11/2025 – 12/2025
- Built a virtual mouse system that controls cursor movement using real-time hand gesture recognition via webcam
- Used MediaPipe Hands to detect 21 hand landmarks and mapped index finger coordinates to screen cursor position
- Technologies: Python, MediaPipe, OpenCV, PyAutoGUI

Image Steganography — Hidden Message Encoder/Decoder 02/2026 – 03/2026
- Developed a tool to secretly embed and extract text messages inside image files using LSB (Least Significant Bit) technique
- Used PIL/Pillow to manipulate pixel values at the bit level without visually altering the image and also Implemented both encoding (hide message) and decoding (retrieve message) modules with a simple Python interface
- Technologies: Python, PIL/Pillow, LSB Steganography

EDUCATION

B.E. ECE, *Govt. College of Engineering, Salem* 2023 – 2027
CGPA: 8.24(upto 6th Sem) Passing Year: **2027** Salem

HSC (Class XII), *Govt. HSS Mettur, Salem* 2023
Score: 91.33% Salem

SSLC (Class X), *Valluvar Vaasuki Mat. HSS, Salem* 2022
Score: 100% Salem

HACKATHON

Smart India Hackathon (SIH) 2025 - Internal Round 17/09/2025 – 17/09/2025
- Participated in the internal college-level round of India's premier national hackathon
- Collaborated with a team to design and prototype a technical solution under time constraints
