Professional Summary

Computer Engineering graduate with a strong foundation in AWS Cloud, Linux Administration, DevOps, programming, and software development. Hands-on experience with AWS services, Docker, Linux, Python, Flask, and web technologies through academic and personal projects. Strong problem-solving and troubleshooting skills with an interest in AWS Cloud, Linux Administration, Application Support, and DevOps.

Education

Anna University **Jul 2023 – May 2026**
B.E. in Computer Engineering

Muthayammal Polytechnic College **Oct 2020 – Apr 2023**
Diploma in Computer Engineering

Technical Skills

Cloud: AWS EC2, S3, IAM, VPC, ECR, ECS, RDS, Lambda, CloudWatch
Linux: Ubuntu, Linux Administration, Shell Commands, System Services, Log Analysis
DevOps: Docker, Docker Hub, Git, GitHub, CI/CD Fundamentals
Programming: Python
Web Technologies: HTML, CSS, JavaScript, PHP, React
Database: MySQL
Coursework: OOPS, DBMS, Computer Networks, Operating Systems

Projects

AWS Cloud Application Deployment

Technologies: AWS EC2, VPC, IAM, ECR, ECS, Docker, Linux

- Deployed containerized web applications using Docker and AWS EC2.
- Built, tagged, and pushed Docker images to Amazon ECR for cloud deployment.
- Configured VPC, subnets, Internet Gateway, route tables, and security groups.
- Used Linux commands and system utilities to troubleshoot connectivity, port access, services, and application availability.

4-Tier PHP Mailing Application on AWS

Technologies: AWS VPC, EC2, ALB, ASG, RDS

- Designed and implemented a production-style 4-tier architecture consisting of Web, Application, Database, and Load Balancer tiers on AWS.
- Configured a custom VPC with 8 subnets across multiple Availability Zones to segment web-facing, application, and database layers.
- Deployed EC2 instances behind Auto Scaling Groups across public and private tiers, using external and internal Application Load Balancers for traffic distribution and high availability.
- Integrated Amazon RDS as a managed and isolated database layer, with per-tier security groups enforcing least-privilege network access.

Blockchain-Based Decentralized Supply Chain Management System

Technologies: Ethereum, Smart Contracts, Blockchain, Web Technologies, Database Management Systems

- Developed a decentralized supply chain management system using blockchain and smart contracts to improve transparency, security, traceability, and real-time product tracking.
- Implemented a decentralized approach to reduce fraud and data tampering across supply chain operations.

Club Roles

CEG Tech Forum – Organizer **2024 – 2025**

- Contributed to planning and execution of CTF events and coordinated technical event activities.
- Assisted in the Sensor Integration workshop during the Vyuhaa event.

CEG Tech Forum – Coordinator **2023 – 2024**

- Assisted in organizing a Cybersecurity workshop, managing registrations and speaker coordination.
- Supported technical setup and event execution while coordinating with participants and speakers.

Certifications

AWS Certified Cloud Practitioner (CLF-C02) – Amazon Web Services
