SUMMARY

Entry-level SOC Analyst with hands-on lab experience across SIEM (Wazuh), network intrusion detection (Snort), vulnerability scanning (Nmap), and AWS cloud security. Built and operated detection environments independently — log analysis, alert triage, and MITRE ATT&CK-mapped incident response — rather than relying on coursework alone.

TECHNICAL SKILLS

SIEM & Monitoring: Wazuh, SOC Operations, Alert Triage, Log Analysis, IOC Analysis

Network Security: Snort (IDS/IPS), Nmap, TCP/IP, DNS, HTTP/HTTPS, Firewall Fundamentals

Email Security: Phishing Analysis, Email Header Analysis, SPF, DKIM, DMARC

Incident Response: Incident Triage, MITRE ATT&CK, Threat Detection

Vulnerability Management: CVE, CVSS, Vulnerability Assessment, Patch Management

Identity & Access: IAM, RBAC, MFA

Cloud Security: AWS, EC2, VPC, Subnets, Security Groups, CloudWatch

Tools: VirusTotal, ManageEngine, Sophos, OpenVPN

PROJECTS

Wazuh SIEM Lab — Endpoint Detection & Response

- Deployed Wazuh for endpoint monitoring and centralized log collection; built custom rules and decoders for File Integrity Monitoring (FIM) and Security Configuration Assessment (SCA).
- Triaged generated security alerts end-to-end — from raw log to root cause — using a structured investigation workflow and active response configuration.

Snort IDS — Network Intrusion Detection

- Deployed Snort IDS on Ubuntu Server and wrote custom detection rules to flag network scanning and reconnaissance activity.
- Validated detection accuracy by generating live test traffic and confirming alerts fired correctly against known attack patterns.

CERTIFICATIONS & TRAINING

- Practical training covering SIEM, SOC operations, network security, incident response, vulnerability management, and cloud security fundamentals.

EDUCATION

BE CSE Cyber security

Sri Shanmugha College of Engineering and Technology | CGPA: 7.0

ADDITIONAL INFORMATION

Areas of Interest: SOC Operations, Blue Team Operations, Threat Detection, Network Security

Languages: Tamil, English
