NANDHABALAN S

Data Analyst | SQL | MongoDB | Python

Salem, Tamil Nadu • dev.nandhabalan@gmail.com • linkedin.com/in/iamnandhabalan

SUMMARY

Final-year B.E. Cybersecurity student with internship experience in cyber security and full stack development, and hands-on skills in Python scripting, MongoDB, and database systems. Comfortable working with structured and unstructured data to extract insights and support decision-making. Eager to apply analytical and technical skills in a data-focused role.

WORK EXPERIENCE

Cyber Security Intern | Smart Info Sec *Mar 2026 – Jun 2026*

- Engaged as a Cyber Security Intern for a four-month period, contributing to a dedicated cyber security project focused on strengthening the organisation's defensive posture
- Supported security assessments and analysed findings to help identify and address vulnerabilities
- Assisted the team with day-to-day security tasks, delivering responsibilities in a timely and dependable manner
- Recognised for professionalism, technical curiosity, and attention to detail throughout the internship

Full Stack Development Intern | TechForge Academy *Sep 2025 – Oct 2025*

- Completed a structured internship programme covering both frontend and backend development fundamentals
- Worked with web technologies including HTML, CSS, JavaScript, and server-side concepts during the programme
- Gained exposure to database integration within full stack applications — connecting frontend interfaces to backend data layers
- Collaborated in a structured learning environment with mentorship from industry professionals

EDUCATION

B.E. in Cybersecurity | Mahendra Engineering College *2022 – 2026*

- Relevant coursework: Data Structures, Cryptography, Network Security, Secure Software Development
- Practical exposure to Python programming, scripting, and system-level operations
- Active member of the college cyber community — organised workshops and technical events

PROJECTS

Hybrid Cloud Data Transfer Optimization | Personal Project *2024*

- Built a data transfer system using Python with multithreading and task queues to handle parallel data movement
- Implemented data compression and lightweight encryption to optimise transfer performance across local and cloud destinations
- Focused on performance benchmarking, reliability testing, and efficiency in bandwidth-constrained environments
- Gained practical experience working with data pipelines, system logs, and transfer metrics

WiFi Deauther (ESP32) | Personal Project *2023*

- Programmed an ESP32 microcontroller using Arduino to understand network packet behaviour
- Analysed network traffic patterns — applicable to data collection and monitoring contexts

TECHNICAL SKILLS

Data & Databases: MongoDB, NoSQL, SQL (basic), data querying and filtering

Programming: Python (scripting, automation, data handling), Java (basic)

Tools & Platforms: Linux, Windows, Wireshark (network data analysis), Nmap

Other: Multithreading, task queues, data compression, CTF (OSINT, Forensics)

ACTIVITIES & COMMUNICATION

- Conducted technical workshops on cybersecurity and programming for college peers
- Contributed to R&D discussions within the Mahendra College cyber community
- Strong written and verbal communication — experienced in public speaking and knowledge sharing
