MANOJ S

Software QE Engineer | Test Automation, API & Web Testing

+91 6374765306 | manojsaravanan0902@gmail.com | Erode, Tamil Nadu | LinkedIn

PROFESSIONAL SUMMARY

Software QE Engineer with 2+ years of combined experience (including internships) in software quality engineering for web applications. Strong programming skills in Java and JavaScript, with hands-on Selenium WebDriver, Appium, TestNG, Maven and Page Object Model automation frameworks across web, API and iOS applications. Experienced in creating test plans, test cases and test scenarios from product requirements and user journeys, and in functional, end-to-end, regression and integration testing, REST API testing (Postman) and SQL data validation. Uses GenAI tools (Claude, ChatGPT Pro, Gemini Pro, Perplexity Pro) to improve testing productivity. Strong debugging, root-cause analysis and problem-solving skills; quick to learn new technologies and collaborates closely with developers and product owners in Agile/Scrum teams.

TECHNICAL SKILLS

Automation: Selenium WebDriver, Appium (iOS), Java, TestNG, Maven, Page Object Model, Data-Driven Framework, JavaScript

Testing: Manual Testing, Software Verification & Validation, STLC, Defect Life Cycle, Requirement Analysis, Test Strategy, Test Planning, Test Design Techniques, Test Scenarios, Test Cases, Test Coverage, Root Cause Analysis, Debugging, Functional Testing, Integration Testing, End-to-End Testing, Regression Testing, System Testing, Smoke & Sanity Testing, Cross-Browser Testing, Troubleshooting

API & Data: SQL, MySQL, PostgreSQL, MongoDB, Postman (REST API validation)

Tools: JIRA (defect tracking & test management), Git, GitHub, Eclipse, VS Code, MS Excel/Word

GenAI Tools: Claude, ChatGPT Pro, Gemini Pro, Perplexity Pro – test case generation, test design, issue analysis

Process: Agile/Scrum – sprint planning, daily stand-ups, defect triage, sprint reviews, release testing

PROFESSIONAL EXPERIENCE

QA Engineer | Yuvaasoft Technologies Pvt. Ltd. *Nov 2025 – Present*

- Analyse product requirements, user journeys and functional specifications to create test plans, test scenarios and test cases with complete coverage of application features.
- Perform **functional**, **integration**, **regression**, **smoke** and **sanity** testing, plus cross-browser and responsive checks, before every release.
- Log, prioritise and retest defects in **Jira** with clear reproduction steps and evidence; investigate failures, isolate root causes with developers, and verify fixes during regression cycles.
- Develop and maintain **Selenium WebDriver (Java)** automation scripts for repetitive and critical regression scenarios identified during manual cycles, reducing manual effort.
- Perform **iOS application testing** and build **Appium** automation for mobile test scenarios alongside web and API testing.
- Validate REST APIs with **Postman** (request/response, status codes, data) and verify data integrity with **SQL** queries.
- Maintain test cases, execution and defect reports; active in sprint planning, stand-ups and reviews.

Projects tested:

- **Yuvaasoft HRM System** – 11-module Django application: performed functional, integration and regression testing across modules and validated data flow between them; tracked defects through to closure in Jira.
- **Audit Desk Dashboard** – Django + Chart.js: validated chart and dashboard figures against backend data after migration from static mock data to backend-driven JSON; ran regression on affected screens. Tested on MacBook (macOS) and used AI tools (Claude, ChatGPT Pro, Gemini Pro, Perplexity Pro) to generate test scenarios and speed up test design.
- **GoFinicky SmartDesk CRM (product page)** – UI, responsive and cross-browser testing of the pricing section, animations and content changes across browsers and screen sizes on MacBook (macOS); used AI tools (Claude, ChatGPT Pro, Gemini Pro, Perplexity Pro) to support test design and issue analysis.

Software Test Engineer (Intern) | XtrazCon Technology Pvt. Ltd. *Sep 2025 – Nov 2025*

- Created and executed functional, regression, smoke and sanity test cases for web applications.
- Reported and tracked defects, supported requirement analysis, and maintained test documentation in an Agile team.

Software Tester (Intern) | KGiSL *May 2025 – Aug 2025*

- Executed manual test cases for functional and regression coverage; wrote Selenium (Java) scripts for key workflows.
- Performed API testing with Postman and SQL validation; reported defects and worked with developers on fixes.

Associate – QA | DNS Gaming, Bengaluru *Jun 2023 – Sep 2024*

- Tested game builds, identified and reported defects, and worked with the team to verify fixes before release.

PROJECTS

OpenCart E-commerce – Manual Testing: Designed and executed 200+ test cases; performed cross-browser, UI and regression testing; tracked defects in Jira.

OpenCart E-commerce – Automation Testing: Built a Selenium + Java + TestNG framework using Page Object Model and data-driven testing; managed builds with Maven; generated TestNG reports for browser-specific regression runs.

EDUCATION & CERTIFICATIONS

B.E. Computer Science and Engineering – Builders Engineering College, Tiruppur (Anna University), 2021–2024, CGPA 8.10/10

Certifications: Manual & Automation Testing (KGiSL, 2025) | Full Stack Development (KGiSL) | AR & VR (2022) | English, Tamil
