THENNARASU V

SOC ANALYST • CYBERSECURITY FRESHER • BLUE TEAM

Virudhachalam, India | +91 9363268548 | hackthensh@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Cybersecurity fresher with a B.E. in Computer Science and Engineering (Cyber Security) and hands-on Blue Team / SOC training gained through self-driven labs and structured coursework. Experienced in security monitoring, log analysis, and alert investigation using Wazuh SIEM and Sophos EDR, with practical exposure to incident investigation, phishing analysis, and MITRE ATT&CK-based threat mapping. Built an AI-powered SOC alert triage tool combining Wazuh, FastAPI, and Google Gemini AI to speed up alert analysis. Also comfortable working across core networking, AWS cloud security fundamentals, and basic scripting. Looking to start as a SOC Analyst and grow into a cloud security specialization.

TECHNICAL SKILLS

SOC Operations: Security Monitoring, Alert Analysis, Log Analysis, Incident Response, Threat Triage
SIEM / EDR: Wazuh SIEM (installation, configuration, log monitoring), Sophos EDR (endpoint monitoring & alert analysis)
Networking & Tools: TCP/IP, DNS, DHCP, VPN, Firewall, OSI Model, Wireshark, Snort, Nmap, Burp Suite
Cloud Security: AWS EC2, IAM, S3, CloudWatch, CloudTrail — access review and log-based monitoring
Security Concepts: MITRE ATT&CK Framework, Phishing Analysis, Brute-Force Detection, Malware Analysis, IOC Identification
OS / Scripting: Windows, Linux, Basic Python, Bash, Git

PROJECTS

AI-SOC Alert Analyzer — *Wazuh + FastAPI + Google Gemini AI*

- Designed and developed an end-to-end AI-powered SOC alert analysis platform integrating Wazuh, a FastAPI backend, and Google Gemini AI to support faster alert triage.
- Built a pipeline to ingest and process Wazuh alerts for continuous monitoring, investigation, threat analysis, and risk assessment.
- Integrated Gemini AI to automatically summarize suspicious events, surface potential threats, and generate investigation insights, structuring the tool around real SOC triage workflows.

SOC Monitoring Lab — *Wazuh*

- Installed and configured Wazuh SIEM in a home-lab environment to monitor Windows and Linux endpoint logs in real time.
- Investigated generated security alerts, correlated log events, and analyzed them for possible incidents and false positives.

EDR Security Testing — *Sophos*

- Monitored endpoint activity through Sophos EDR and analyzed generated alerts to identify potential threats and suspicious behavior.
- Practiced fundamental threat detection and response steps, including alert validation and escalation reasoning.

Phishing Email Investigation

- Analyzed email headers, embedded URLs, and attachments across sample phishing emails to identify indicators of compromise (IOCs).
- Mapped identified IOCs and attacker techniques to the MITRE ATT&CK framework and prepared a basic incident report summarizing findings.

AWS Security Monitoring Lab

- Set up EC2 instances and configured IAM permissions following least-privilege principles, and reviewed S3 bucket access settings.
- Monitored CloudWatch and CloudTrail logs to track account activity and identify potentially risky configurations.

CTF / SECURITY CHALLENGES

• Participated in hands-on CTF challenges covering Blue Team investigation, OSINT, web security, steganography, GraphQL, and digital forensics.
• Practiced analyzing challenge artifacts, identifying indicators, using security tools, and solving investigation-based security scenarios.
• Participated in Holmes CTF 2026 and NullOrigin CTF challenges with a focus on defensive security and investigation.

CERTIFICATIONS / TRAINING

- LetsDefend – SOC Fundamentals
- Blue Team / SOC Analyst Training
- Cyber Security Fundamentals
- AWS Security Fundamentals
- TryHackMe — Practical Security Labs
- PortSwigger Web Security Academy — Practical Labs

EDUCATION

B.E., Computer Science and Engineering — Cyber Security
Sri Shanmugha College of Engineering and Technology
