PROFESSIONAL SUMMARY

Final-year Metallurgical Engineering student at Government College of Engineering, Salem, with hands-on industrial internship experience in manufacturing, quality control, and non-destructive testing. Certified NDT Level II professional (VT, PT, MT, UT, RT, RIF). Demonstrated technical aptitude through a mini project on chloride-induced pitting corrosion in AISI 304 stainless steel.

EDUCATION

B.E. – Metallurgical Engineering *Nov 2022 – May 2027*

Government College of Engineering, Salem

CERTIFICATIONS

NDT Level II Certification — Methods: VT · PT · MT · UT · RT · RIF (2026)

INDUSTRIAL INTERNSHIPS

Wheels India Limited *Apr – May 2026*

Process & Quality Intern

- Observed the steel wheel manufacturing process, including roll forming of steel strip/plate into rim and disc shapes and joining of components through welding
- Noted that raw material (steel plate/strip) is sourced externally rather than cast in-house, and is progressively rolled and formed into the wheel profile before welding
- Participated in quality control activities including dimensional inspection, visual examination, and process parameter monitoring
- Gained exposure to materials handling and defect identification on the production floor

Queens India NDT *Jun 2026*

NDT Intern | Industrial Inspection

- Learned and practiced NDT Level II techniques (PT, MT, UT, VT, RT) under supervision, using standard reference blocks and a limited number of test samples
- Integrated NDT Level II coursework with hands-on field inspection practice
- Gained practical exposure to inspection documentation, defect reporting, and applicable codes and standards

TECHNICAL SKILLS

NDT Methods: VT · PT · MT · UT · RT · RIF (Level II Certified)

Metallurgical Core: Heat treatment · Mechanical testing · Welding technology · Casting engineering

Software: MS Excel · MS Word

Mini Project: Corrosion mechanism studies

MINI PROJECT

Study of Chloride-Induced Pitting Corrosion in AISI 304 Stainless Steel

Guide: Prof. A. Balamurugan | Government College of Engineering, Salem

- Studied the mechanism of chloride-induced pitting corrosion in AISI 304 stainless steel, including passive film breakdown and anodic dissolution behaviour
- Reviewed industrial applications of AISI 304 stainless steel and mitigation techniques for pitting corrosion
- Examined the advantages and limitations of AISI 304 stainless steel in corrosive conditions

ACHIEVEMENTS

- Metallography Winner – MetMat 26.0, GCE Salem — recognised for excellence in microstructural analysis and metallographic specimen preparation

LANGUAGES

Tamil (Native) · English (Professional) · Telugu (Basic)
