LEO REX J

AI/ML ENGINEER

+916380849965 | Gmail | Linked In|Github| Medium

AI/ML Engineer with hands-on experience building Python-based machine learning, computer vision, and NLP applications, inference,experienced in model training object detection, OCR, and AI application development. Developing interactive AI systems using CNN and navigation assistance, and API integration to build reliable,maintainable AI components. And with practical experience in OpenCV,React, and Laravel.

SKILLS

AI	Data science	python	SQL	NLP
Machine lerning	Java	C++	Git & GitHub	API Testing
Web Scrapping	Open CV	Excel	AI Tools	Web Development

PROFESSIONAL EXPERIENCE

Python Project Intern — Cybernaut Ed Tech Pvt. Ltd. (Feb 2026 – Mar 2026)

- Worked on Python-based projects involving web scraping, machine learning, Flask, and Django .
- Applied Python programming and practical development concepts through project-based assignments and development activities.

Python AI/ML Project Intern — Cybernaut Ed Tech Pvt. Ltd. (Apr 2026 – May 2026)

- Studied Developed a CNN-based application using TensorFlow, OpenCV, Python, and Streamlit.
- Implemented and gained knowledge practically on AI/ML-powered image classification and prediction.

Software Development Intern — Naga Limited (Jul 2026 – Sep 2026)

- Contributed to web application development using **Laravel and React**, including college registration .
- Worked on frontend interfaces, backend integration, form validation, master-data modules, and application workflows on logistics management application of the reputed industry.

PROJECTS

Low-Cost AI Smart Vision Glasses – Assistive Navigation for the Visually Impaired

- Built the software for AI-powered glasses using YOLO object detection, OCR and voice synthesis, giving real-time audio feedback on obstacles and text.
- Designed a Raspberry Pi and camera-based architecture as an affordable alternative to commercial smart glasses. The hardware build is planned as a future update.

Fake News Detection AI – AI/ML/NLP-Based Classifier

- Built a fake news detection system using NLP techniques and machine learning models to classify news content as real or fake.

Product Sentiment Analyzer – NLP-Based E-Commerce Review Analytics (Team Project)

- Built a full-stack web app that scrapes Amazon and Flipkart reviews with Selenium and classifies them as positive, negative or neutral using TextBlob and VADER.
- Developed a Flask REST API with MongoDB storage and a React dashboard (Chart.js/Recharts) showing sentiment distribution, recent feedback and review statistics.

Skin Disease Classification – Deep Learning Diagnostic Assistant

- Built a CNN-based multi-class classifier in TensorFlow/Keras to detect conditions such as melanoma, eczema, acne and psoriasis from dermoscopic images (HAM10000 dataset).
- Applied OpenCV preprocessing and evaluated the model with accuracy, precision, recall, F1-score and confusion matrices, with real-time prediction from uploaded images.

LUNA – AI Visual Knowledge Engine (3D/Interactive Learning Application)

- In ProgressBuilding an AI system that picks the best visualization for a topic (2D diagrams, 3D models or physics simulations) instead of returning plain text answers.
