Professional Summary

Results-driven B.Tech Artificial Intelligence & Data Science student (CGPA: 8.0/10.0) with hands-on experience building end-to-end machine learning pipelines, predictive models, and analytics dashboards using real-world astronomical and healthcare datasets. Proficient in Python, SQL, Scikit-learn, Pandas, NumPy, and Power BI with demonstrated ability to perform exploratory data analysis, feature engineering, and data-driven decision-making.

Education

Gnanamani College of Technology — Namakkal, Tamil Nadu
Bachelor of Technology in Artificial Intelligence and Data Science — *Aug 2023 – May 2027*
- CGPA: 8.0/10.0

Green Park Matric Higher Secondary School — Cuddalore, Tamil Nadu
Higher Secondary Certificate (HSC) – 12th Standard — *2022 - 2023*
- Percentage: 78.5%

Technical Skills

Languages: Python, SQL, C
Machine Learning: Regression, Classification, Random Forest, SVM, Logistic Regression, Model Evaluation, Cross-Validation
Libraries & Frameworks: Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
Data Engineering: MySQL, ETL, Data Cleaning, Data Preprocessing, Feature Engineering
Visualization & BI: Power BI, Dashboard Design

Projects

Exoplanet Detection using Machine Learning | *Python, Pandas, NumPy, Scikit-learn, Matplotlib* 2026
- Built an ML classification pipeline to detect exoplanets from 9,000+ NASA Kepler stellar observations, achieving **92% accuracy**.
- Cleaned data and engineered 8 domain-specific stellar features, handling 15%+ missing values and improving model precision by 12%.
- Benchmarked 4 algorithms (Random Forest, SVM, Logistic Regression, KNN) via cross-validation; Random Forest performed best with an F1-score of 0.91.

Near-Earth Object Risk Analysis | *Python, Pandas, NumPy, Seaborn, Scikit-learn* 2026
- Analyzed 90,000+ NASA NEO records to classify potentially hazardous asteroids, achieving **95% accuracy** and 0.93 AUC-ROC.
- Built a preprocessing pipeline that cleaned and normalized 20+ asteroid features, reducing data inconsistencies by 30%.
- Identified top 5 features (miss distance, velocity, magnitude, diameter, orbital period) driving hazard classification via feature importance analysis.

Healthcare Analytics Dashboard | *Python, SQL, Power BI, Pandas* 2025
- Designed an interactive Power BI dashboard tracking 8 healthcare KPIs across 5,000+ patient records for real-time monitoring of admissions, outcomes, and readmissions.
- Built an ETL pipeline in Python and SQL to clean and transform healthcare data, cutting data prep time by **40%** and improving reliability.
- Conducted EDA that revealed a 22% higher readmission rate in patients over 60, enabling targeted intervention recommendations.

Certifications

Data Analytics with Python — *NPTEL | Jan 2025 – Apr 2025*
Introduction to Machine Learning — *NPTEL | Jan 2026 – Apr 2026*
