PROFILE

Generative AI and Full Stack Developer experienced in building LLM-powered applications, Hybrid RAG pipelines, and FastAPI/PostgreSQL backends. Skilled in React and modern full-stack technologies, seeking an entry-level opportunity in AI, Digital Innovation, or Full Stack Development.

EDUCATION

Bachelor's Degree in Computer Science and Design 09/2022 – 03/2026
Karpagam Academy of Higher Education, Coimbatore, India | **CGPA:** 8.28

WORK EXPERIENCE

AI / Generative AI Intern — Kumaran Systems Pvt. Ltd. 10/2025 – 02/2026
Chennai, India

- Engineered LLM-powered Generative AI systems, including advanced Hybrid RAG pipelines for real-world applications
- Deployed and optimized cloud and local LLM inference for scalable AI workloads
- Built end-to-end full-stack GenAI applications with efficient frontend–backend integration
- Developed high-performance backend services using FastAPI with REST APIs and WebSockets for real-time chat systems

PROJECTS

QueryFlow.ai

- Built a scalable document-aware chatbot using advanced Retrieval-Augmented Generation (RAG) architectures
- Engineered a Hybrid RAG pipeline integrating multiple vector stores (Pinecone, FAISS) for improved retrieval performance
- Implemented file ingestion and semantic search for accurate document-based querying
- Improved response quality by optimizing chunking strategies and retrieval workflows
- Delivered structured, context-rich outputs from complex unstructured datasets

Multi-Model AI Chat Application (Real-Time Project)

- Built a scalable real-time conversational AI platform supporting multiple Large Language Models (LLMs)
- Engineered dynamic model routing and selection across Gemini and Claude to optimize performance and response quality
- Designed robust conversation state management and persistence using PostgreSQL
- Developed REST APIs using FastAPI and integrated with a React frontend, implementing WebSocket-based state management for real-time conversation synchronization

AI-Powered VS Code Extension (Amazon Q–Like Coding Assistant)

- Developed an AI-powered coding assistant extension inspired by Amazon Q Developer for contextual code assistance and project-level understanding
- Implemented agent-based workflows for code analysis, planning, file operations, and terminal interaction with human-in-the-loop execution confirmation
- Integrated multiple LLM providers and backend services to support intelligent code generation, modification, explanation, and debugging within VS Code

SKILLS

Programming Languages: C, C++, Java, Python
AI & Generative AI: LLMs, Hybrid RAG, AI Agents
Backend & APIs: FastAPI, REST APIs, WebSockets, Node.js, Express.js
AI Frameworks & Tools: LangChain, LangGraph, n8n, MCP, Ollama
Frontend Technologies: React.js, TypeScript, HTML, CSS, Tailwind CSS
Databases: SQL, PostgreSQL, MongoDB
Testing & Utilities: Selenium, Postman, GitHub Actions
