Summary

Software Developer specializing in the MERN Stack with hands-on internship experience building production-grade web applications using **React.js**, **Node.js**, **Express.js**, **MongoDB**, and **JavaScript**. Experienced in developing **RESTful APIs**, implementing **JWT Authentication** and **Role-Based Access Control (RBAC)**, and building reusable **React components**. Worked on a drag-and-drop **Landing Page Builder**, asynchronous website duplication workflows using **AWS SQS**, and real-time features with **Socket.io**. Developed and published reusable React component packages as **NPM packages**, with a strong focus on building scalable applications and writing clean, maintainable code.

Technical Skills

- **Languages:** JavaScript (ES6+), HTML5, CSS3, Python (Fundamentals)
- **Frontend Ecosystem:** React.js
- **UI Frameworks & Libraries:** Tailwind CSS, Material UI (MUI), Ant Design, AG Grid
- **Backend & Integration:** Node.js, Express.js, RESTful APIs, Axios, Postman
- **Authentication & Real-Time:** JWT Authentication, RBAC, Socket.io
- **Cloud & Messaging:** AWS SQS
- **DevOps & Tools:** Git, GitHub, npm, VS Code
- **Databases:** MongoDB

Professional Experience

Software Developer Intern Nov 2025 – Aug 2026
Aroopa Technologies Pvt. Ltd. *Chennai, India*

- Developed and maintained core features of a **drag-and-drop Landing Page Builder** using **React.js**, contributing approximately **30%** to its development through reusable and customizable **page elements and sections** that enabled users to build and manage websites without coding.
- **Developed the complete asynchronous website duplication workflow** using **AWS SQS**, where the backend created cloning jobs, queued them for background processing, and SQS workers cloned website themes, pages, and sections.
- Implemented **clone-status APIs and frontend polling** to track asynchronous cloning jobs, allowing the frontend to detect completion and dynamically update the UI with the cloning status.
- Contributed approximately **40% to the backend development** of assigned features by developing **REST APIs** using **Node.js and Express.js** and integrating them with **React.js** applications.
- Resolved and completed nearly **100% of assigned bugs** in the Landing Page Builder by identifying functional issues, debugging root causes, and implementing fixes to improve application stability.
- Developed and published reusable React component packages, including **@obulaxmi/input-stepper** and **@obulaxmi/icon-package**, as reusable **NPM packages**.
- Contributed approximately **50% to MongoDB development**, handling **database integration, data management, and MongoDB-related backend functionality** for assigned features.
- Used **Git** extensively for version control, including **branches, commits, pushes, pull requests, merges, and conflict resolution** during collaborative development.
- Implemented **JWT-based authentication** and **Role-Based Access Control (RBAC)** to provide secure multi-user access and role-based permissions.

Education

Sri Shanmugha College of Engineering and Technology Salem, India
B.Tech in Artificial Intelligence and Data Science — CGPA: 8.5/10 *2022 – 2026*
