PROFESSIONAL SUMMARY

B.E. Computer Science Engineering (Cyber Security) graduate (2026) with a foundation in networking fundamentals, OSI model, TCP/IP and IP addressing, supported by hands-on experience in Linux administration and AWS cloud infrastructure (VPC, EC2, Security Groups, ELB). Cisco Networking certified, with practical exposure to network connectivity testing, troubleshooting, secure remote access (SSH), server configuration and infrastructure monitoring through internships and independent projects. Seeking an entry-level Network Infrastructure / Network Engineer Apprentice role supporting network setup, testing, documentation and cloud infrastructure.

TECHNICAL SKILLS

Networking: Networking fundamentals, OSI model, TCP/IP, IP addressing and subnetting, network connectivity testing and troubleshooting, SSH remote access, Nginx (web server / reverse proxy configuration)
Cloud Infrastructure (AWS): VPC, Security Groups, EC2, ELB, Target Groups, Auto Scaling, EBS, S3, IAM, RDS, CloudWatch, SNS, Lambda
Operating Systems: Linux (Ubuntu) — administration, user and permission management, Shell / Bash scripting
Tools & Version Control: Git, GitHub, Jenkins, Maven, Docker
Infrastructure Automation (Basic): Terraform, Ansible, Kubernetes
Programming & Databases: Python (Basic), Shell/Bash, SQL

EDUCATION

B.E. Computer Science and Engineering (Cyber Security) | 2022 – 2026
Sengunthar Engineering College, Tiruchengode | CGPA: 8.01/10

INTERNSHIPS

DevOps Intern — QSpiders, Bangalore

- Administered Linux (Ubuntu) servers, including user management, file permissions, service configuration and shell-based system tasks.
- Configured AWS infrastructure components including EC2 instances, VPC networking, Security Groups and SSH-based secure remote access.
- Verified server connectivity and resolved access, configuration and deployment issues through systematic troubleshooting.
- Used Git and GitHub for version control and built CI/CD pipelines with Jenkins and Docker for automated cloud deployment.

Python Intern — Emglitz Technologies, Coimbatore

- Developed Python applications and automation scripts using object-oriented programming.
- Strengthened debugging, problem-solving and scripting skills through hands-on assignments.

PROJECTS

Web Application Deployment on AWS EC2 — *EC2, VPC, Security Groups, Nginx, SSH, S3, CloudWatch*

- Created and configured AWS EC2 instances within a custom VPC for web application hosting.
- Installed and configured the Nginx web server, managed Security Group rules to control inbound and outbound traffic, and set up SSH-based server access.
- Validated network connectivity and service reachability, troubleshooting port, IP and access issues to restore availability.
- Created and managed Amazon S3 buckets and monitored EC2 CPU utilisation to ensure application performance and availability.

CI/CD Pipeline for Java Web Application — *Jenkins, Git, Maven, Docker, AWS EC2, Linux*

- Built an automated CI/CD pipeline using Jenkins for continuous integration and deployment of a Java web application.
- Set up the Jenkins server on a Linux-based AWS EC2 instance, covering package installation, service configuration and access setup.
- Integrated Git and Maven to automate source code management, build and packaging.
- Containerised the application with Docker and deployed it on AWS EC2, diagnosing build, container and connectivity failures using Linux logs and command-line tools.

Secure Federated Learning Framework for Privacy-Preserving AI — *Python, Flask, PyTorch*

- Developed a decentralised client–server framework in which distributed nodes exchange model updates over network endpoints without sharing raw data.
- Implemented differential privacy techniques to protect sensitive information during training.

CERTIFICATIONS

- Cisco Networking Certification
- DevOps Certification — QSpiders
- Python Certification — Emglitz Technologies
- Ethical Hacking & Cyber Security

ACHIEVEMENTS

- NCC 'C' Certificate — Grade A
- National Camp (EBSB)
