PROFESSIONAL SUMMARY

Motivated Computer Science student with strong foundations in software development, database systems, and machine learning. Experienced in building full-stack applications using Python and React/Flask, designing relational databases, and developing computer-vision and IoT solutions. Adept at translating requirements into working software through clean code, version control, and iterative debugging.

TECHNICAL SKILLS

Programming Languages: Python (Pandas, NumPy, OpenCV), C++, Java, SQL
Web & Application Development: React, Flask, HTML5, CSS3, Streamlit, REST APIs
Database Management: MySQL, Relational Database Design, Schema Normalization (3NF), Query Optimization
Tools & Platforms: VS Code, Git, GitHub, Selenium, ESP32 (Embedded/IoT)
Core Competencies: Object-Oriented Programming, Machine Learning Fundamentals, Debugging, Agile Collaboration

INTERNSHIP EXPERIENCE

Database Intern — Femtosoft Technologies, Chennai *May 2025 – Jun 2025*

- Built and optimized SQL queries across core relational tables for a warehouse management system application.
- Applied 3NF database normalization principles, eliminating 15% data redundancy and improving system performance.
- Worked in a 4-member development team, contributing to schema design and structured technical documentation.

Python Intern — Cybernaut *Jan 2025 – Feb 2026*

- Developed automated web scraping pipelines using Selenium to collect and structure 10,000+ data records.
- Built Python-based data processing scripts with Pandas, improving processing efficiency by 20%.
- Debugged and optimized code across the pipeline to ensure reliable, repeatable execution.

UI/UX Virtual Intern — Novitech Solution *Nov 2024*

- Analyzed user-behavior patterns across 4+ digital interface workflows to inform UI/UX design decisions.

PROJECTS

VidyutSetu — Smart Electricity Complaint Management System (React, Flask)

- Built a full-stack complaint management platform with separate admin and public-facing interfaces.
- Implemented complaint submission, withdrawal flows, and automatic resolution notifications end to end.
- Resolved environment and deployment issues to ensure a stable local development setup.

Sign Language Translator Using Machine Learning

- Engineered a computer vision model using 21 hand-tracking landmarks via OpenCV for real-time gesture recognition.
- Translated recognized gestures into real-time text and speech output with high accuracy.

Smart IoT LT Line Protection System

- Built an ESP32 microcontroller pipeline integrating 3+ multi-sensor monitoring arrays for live line protection.
- Streamed live operational status data to a centralized cloud dashboard for real-time monitoring.

EDUCATION

B.E. Computer Science and Technology — Vivekanandha College of Engineering for Women *2023 – 2027*
Higher Secondary Education — Shri Renuga Vidhyalayam MHSS *2022 – 2023*

CERTIFICATIONS

- NPTEL — Data Science for Engineers (IIT Madras)
- Python, Java, and C++ Core Certifications — Cybernaut
- Workshop — Artificial Intelligence, Machine Learning, and Robotics Automation
