HOW TO INTERPRET THE REPORT?

This assessment provides insights into an individual's alignment towards different technology areas and their readiness for technology-specific learning pathways.

The final technology scores are derived using:

- responses to interest-based statements, which help understand alignment towards broader technology areas, and
- skill readiness across key technical skill areas relevant to different technologies.

These components are combined to provide an overall readiness indication for each technology pathway.

Technology Scores
Each technology score reflects the individual's current alignment and readiness for learning and working within that technology area.
Scores are categorized into:

Foundational (0–30): Indicates emerging readiness for the technology. Individuals at this level may benefit from strengthening foundational concepts and exploring introductory learning pathways before progressing further.

Intermediate (31–70):
Indicates functional readiness for the technology. Individuals at this level are likely to adapt well to structured learning pathways and applied technology environments within the domain.

Advanced (71–100):
Indicates strong readiness for the technology. Individuals at this level are likely to demonstrate stronger alignment towards the domain and may adapt effectively to more advanced learning pathways and technology applications.

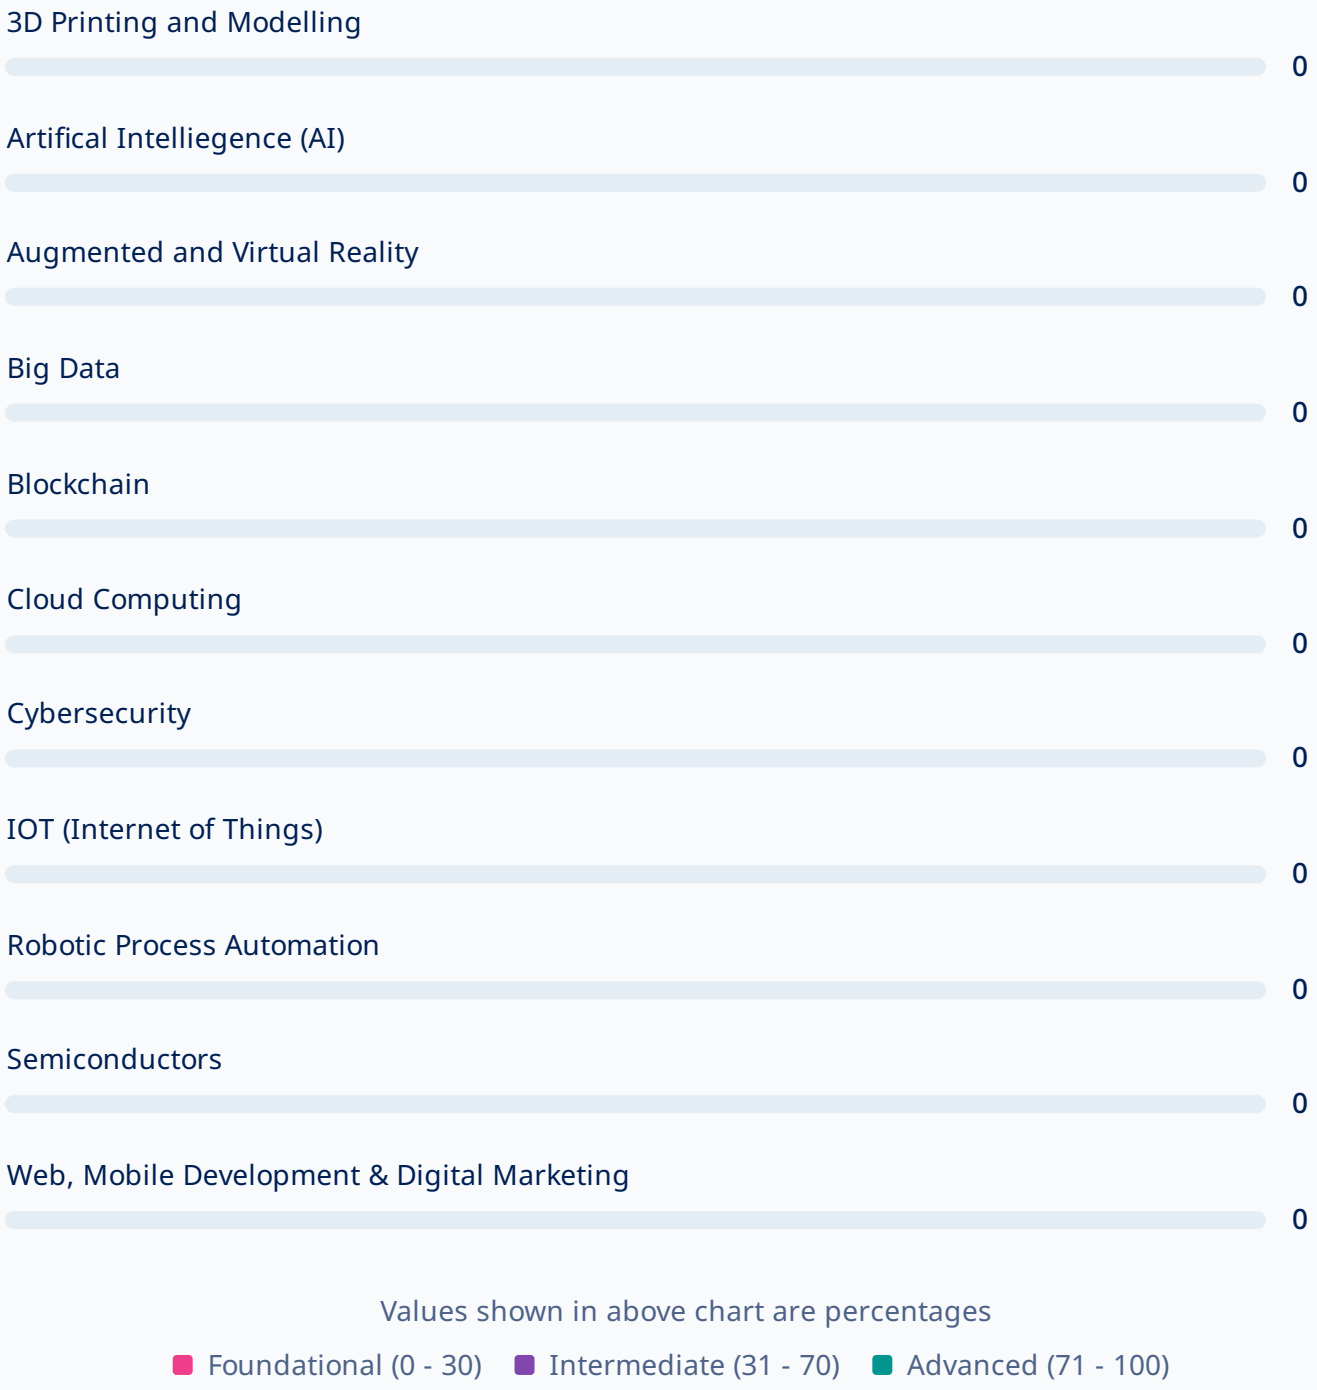

Technology Pathway Recommendations Based on the overall technology scores, the report provides:

- indicative roles and occupations
- learning pathway recommendations

These recommendations are intended to support exploration and development within relevant technology areas.
The scores are intended to indicate current alignment and readiness, and should not be interpreted as a measure of overall capability or long-term potential. The accuracy of the results depends on the participant's responses during the assessment.
