CAREER OBJECTIVE

Cybersecurity undergraduate focused on Vulnerability Assessment and Penetration Testing (VAPT), with hands-on practice in Web, API, Android, and Network Security testing. Familiar with reconnaissance, enumeration, vulnerability identification, validation, and security testing methodologies, with practical experience using tools such as Nmap, Burp Suite, MobSF, JADX, and Nessus. Building practical VAPT skills through security labs, CTF challenges, and hands-on security testing.

TECHNICAL SKILLS

Security Standards: OWASP Top 10, OWASP API Security Top 10, OWASP Mobile Top 10, CWE, CVSS
Network & Web Security: Nmap, Burp Suite, Dirsearch, WPScan, Kali Linux, Nessus
API & Android Security: MobSF, JADX, MEmu
Security Labs: Metasploitable 2, DVWA
AI Security Labs: PortSwigger LLM Labs

HANDS-ON PRACTICE

Bill App – Android VAPT

- Performed static and dynamic security testing of an Android application in a controlled environment.
- Used MobSF and JADX for APK analysis, source/code inspection, component analysis, and runtime testing.
- Analyzed AndroidManifest.xml, application permissions, exported components, activities, services, and broadcast receivers.
- Practiced testing for insecure data storage, hardcoded secrets, insecure configurations, and improper permission usage.

Bill App – Web & API Security Testing

- Performed web/API security testing in a controlled environment using Burp Suite for request interception, modification, and response analysis.
- Practiced HTTP method manipulation, parameter tampering, authentication and authorization testing, and input validation testing.
- Tested for common vulnerabilities including SQL Injection, Cross-Site Scripting (XSS), IDOR/BOLA, and security misconfigurations.
- Performed reconnaissance, endpoint discovery, vulnerability identification, and manual validation of security findings.

PROJECTS

Biometric Authentication and Simulation

- Developed a biometric authentication-based project.
- Explored secure user authentication concepts.
- Gained practical knowledge of authentication mechanisms and cybersecurity principles.

SECURITY PRACTICE & CTF

- PortSwigger Web Security Academy – 50 Labs Completed • Practiced web application vulnerabilities including Business Logic, Session Management, CSRF, SSRF, Race Conditions, and CORS.
