PROFESSIONAL SUMMARY

Motivated to begin my career as a Software Engineer in an organization that encourages innovation, learning, and professional growth. I am eager to apply my technical knowledge to build efficient and user-friendly software solutions. I enjoy learning new technologies and adapting to challenging environments. My goal is to continuously improve my skills while contributing to the success of the organization through dedication, teamwork, and a passion for technology.

EDUCATION

KONGUNADU COLLEGE OF ENGINEERING AND TECHNOLOGY

Bachelor's of Engineering - Electronics and Communication Engineering, CGPA: 7.93
2023-2027

SKILLS

- JAVA
- C PROGRAMMING
- WEB-DEVELOPING
- TYPE-WRITING
- PROBLEME SOLVING
- EVENT ORGANIZING
- LEADERSHIP

PROJECTS

- **VLSI BASED COMMUNICATION SYSTEM**

Software Used**:** Xilinx Vivado

Designed and implemented a VLSI-based digital communication system focusing on efficient data transmission and signal processing at the hardware level. The project involved modeling core communication blocks such as transmitter, channel, and receiver using hardware description concepts, with emphasis on low power consumption, reduced delay, and optimized area utilization.

- **AI BASED NOISE REDUCTION IN COMMUNICATION SYSTEM**

Software Used: Matlab R2015a

This mini project focuses on the design and implementation of an AI-based noise cancellation technique to improve signal quality in communication systems. The system uses machine learning algorithms to identify and suppress unwanted noise from input signals while preserving the original information content.

- **SMART AUTOMATED MEDICINE DISPENSER USING ESP32 AND IOT**

Software Used: Ardino IDE

Developed an IoT-based medicine dispenser using ESP32, a stepper motor, and a servo motor to automate tablet dispensing. A web-based interface was created to control the dispensing process, ensuring accurate medicine delivery while reducing manual effort and improving efficiency.

- **HOSPITAL QUEUE AND RESOURCE MANAGEMENT SYSTEM**

Software Used: VS Code

Developed a smart hospital management system to simplify patient appointments, queue management, and resource allocation. The system enables online doctor booking, real-time queue tracking, bed management, and medicine inventory monitoring through a user-friendly web interface.

INTERNSHIP

ILIFE TECHNOLOGY WEB DESIGNING

Role: Front-End Developer

Completed the Internship in Ilife technology in the title of web designing in html, css, javascript. And had an great experience of designing the web page as the mnc companies web pages and interesting to learn more about the full stack development and had an basic knowledge in the course. Designed modern, user-friendly web pages inspired by industry-standard websites, with a strong focus on responsive layouts, clean user interfaces, and improved user experience. Worked on implementing reusable components, optimizing webpage performance, and understanding frontend development best practices.

ACHIEVEMENTS

- Secured third prize in Cognify Hackathon for automated medicine dispenser.
- Qualified for final round in Innohac for Hospital queue and resource management system.
- Participated in Smart India Hackathon (SIH) 2024& 2025.
- Participated in MSME 2025.
- Achieved by organizing the event of department Symposium program in 2025.

CERTIFICATIONS

Completed NPTEL – Introduction to Industrial IoT4.0.

Completed value added courses in

- VACAD03 – CoreJava
- VACEC13 – Industrial Advanced PCB Design

EXTRA CURRICULAR

- Playing Chess
- Organizing events

LANGUAGES KNOWN

- Japanese
- English
- Tamil
