PROFILE

Electronics & Communication Engineering graduate with practical knowledge of Embedded Systems, C/C++, and Digital Electronics, seeking to contribute to innovative product development. Aim to apply my programming and circuit design skills to build reliable, real-time solutions while continuously upskilling with emerging technologies and delivering measurable value to the organization**.**

EDUCATION

Kongunadu College of Engineering and Technology — Thottiyam (2024-2027)
B.E ECE — (pursuing– CGPA 6.8)

Kongunadu Polytechnic College — Thottiyam (2018-2021)
DEEE — percent 79%

EXPERIENCE

1. **Saint-Gobain International Company -Kanchipuram (2021-2022)**

   Auto clave: Operated and monitored autoclave machines in production process
   Maintained safety and quality standards during operations
   Checked pressure, temperature, and machine performance
   Supported production team in daily plant activities.

2. **Frontline Systems and Private Limited Company – Chennai (2022-2023)**

   UPS & Solar System Technician: Installation and maintenance of UPS and solar systems
   Troubleshooting electrical and system-related issues
   Battery checking and preventive maintenance
   Customer support and service handling.

INTERNSHIP

1. **AT ETS ACADEMY – (NETWORKING) ---ERODE (2025)**
   - Learned networking fundamentals including LAN,WAN,TCP/lP,and OSI Model
   - Learned basic network security concepts and protocols
   - Worked with cisco networking concepts and network design

PROJECTS

REAL-TIME LANDSLIDE SURVEILLANCE SYSTEM USING ENVIRONMENTAL SENSORS

Developed an IoT-based landslide monitoring system using soil moisture, rainfall, and vibration sensors integrated with Arduino. Implemented real-time data monitoring and alert generation to provide early warnings and improve disaster management in landslide-prone areas.

REAL TIME ECG MONITORING AND ANALYSIS

A Real-Time ECG Monitoring and Analysis System to continuously acquire, process, and analyze cardiac signals. Integrated ECG sensors with a microcontroller for accurate data collection and implemented signal processing techniques to reduce noise and improve signal quality. The system enables real-time heart rate monitoring, ECG waveform visualization, and early detection of abnormal cardiac patterns, supporting efficient healthcare monitoring."

CERTIFICATION

- NPTEL – Introduction to Industry 4.0 & IoT
- Java Programming in Lead Code

SKILLS & INTERESTS

SKILLS:

- C ++
- Java
- Communication

Interests:

- Software Development
- Data Analysis
- Embedded Systems
