	shaikhallaudin14@gmail.com

Summary

I'm a recent B.E. graduate in Electronics and Communication Engineering, look ing to kickstart my career in the corporate world. I've got a good grasp of networking, cybersecurity, Python, and Linux, and I'm excited to apply what I've learned in college to real-world projects. I'm a fast learner, a team player, and always ready to take on new challenges. I'm looking for a role where I can grow, contribute, and keep learning every day.

Skills

- Networking
- Linux
- Cyber security
- AWS
- SIEM (Splunk / Q Radar)
- Python / Scripting

Language

- English
- Tamil
- Hindi
- Marathi

Education

Bachelors

Electronic & Communication Engineering, Al-Ameen Engineering college

C.S.I BOYS HIGHER SECONDARY SCHOOL (2020-2021)

Projects

SOLAR POWERED WIRELESS VEHICLE CHARGING STATION

- Designed and developed a functional prototype of a wireless EV charging station powered entirely by solar energy.
- Integrated a solar panel, DC-DC buck converter, TP4056 module, and Li-ion batteries to store and regulate solar energy. Implemented an Arduino Uno microcontroller for system automation, including vehicle detection using an IR sensor and power management via relay switching.
- Deployed wireless inductive power transfer using transmission and receiver coils to charge the vehicle without physical connectors. Provided real-time user feedback through a 16x2 LCD display with I2C interface.
- Ensured safety with overcharging protection and modular insulation housing. And validate system performance under varying sunlight and alignment conditions, demonstrating feasibility for scalable EV infrastructure.

Key Achievements:

- Successfully integrated solar energy and wireless charging technologies into a single eco-friendly system.
- Automated vehicle detection and charging using embedded systems and sensor interfacing.
- Enhanced usability and sustainability, promoting green energy in transportation.

Enterprise Network and System Administration Simulation

- **Network Design & Simulation:**
  - Created a WAN network topology using Cisco Packet Tracer.
  - Configured dynamic IP addressing using DHCP.
  - Enabled secure remote access via TELNET and SSH.
  - Implemented OSPF for inter-network communication.
  - Used ACLs to control network traffic and PAT for IP address translation.
- **Linux System Administration:**
  - Structured user management by creating functional teams: Server, Database, and Application.
  - Configured separate partitions and set up role-based access controls.
  - Enforced password aging policies and hierarchical admin roles (XYZU1, XYZU2, XYZU3).
  - Automated setup for scalable system management across user groups.

Key Achievements:

- Successfully simulated an enterprise-grade WAN with layered security and remote accessibility.
- Demonstrated capability in both network configuration and Linux system management.
- Reinforced enterprise IT practices such as access control, system segmentation, and compliance-driven password policies.

Certification and Technical Courses

KGiSL Micro College IMS

- CCNA: Introduction to Networks
- CCNA Enterprise Networking, Security and Automation
- CCNA Switching, Routing and Wireless Essentials
- Red Hat System Administration I (RH124)
- Red Hat System Administration II (RH134)
- Ethical hacking concepts
- Cyber security concepts
- Generative AI model
