Executive Summary

Aspiring Web Developer and B.Tech Artificial Intelligence and Data Science student with knowledge of HTML, CSS, JavaScript, Python, and SQL. Passionate about building responsive and user-friendly websites and integrating AI-powered features into web applications. Seeking an opportunity to apply my technical skills and grow as a developer while contributing to innovative projects.

Tools and Technologies

- Programming Languages : Python, JavaScript
- Frontend Development : HTML5, CSS3
- Database : SQL
- Developer Tools : AI Tools, Video Editing, Graphic Designing
- Core Concepts : Responsive Web Design, Basic AI Integration

Education

Kongunadu College of Engineering &Technology - B.Tech Artificial Intelligence and Data Science — 2022–2025
- CGPA: 6.5/10

Diploma –Kongunadu Polytechnic College - DEEE — May 2022
- Cum Per: 88.0%

Projects

AR-TIFACT – AI & AR Cultural Heritage Project

1. **Developed an AI-powered cultural heritage platform** using AR technology and generative AI to provide interactive storytelling for historical artifacts and monuments.
2. **Built the application using Python-based AI tools and web technologies**, integrating image recognition and 3D visualization for immersive user experiences.
3. **Designed an interactive AR interface** that allows users to scan artifacts and receive real-time AI-generated historical insights and contextual information.
4. **Impact**: Improved museum visitor engagement by providing an educational, interactive digital experience and demonstrated the ability to integrate **AI with modern web applications**.

TRAFFIC SIGN RECOGNITION USING ML

1. Built a traffic-sign recognition pipeline using OpenCV, Python, and TensorFlow/Keras CNN models trained on multi-class road-sign datasets.
2. Applied preprocessing (HSV filtering, thresholding, contour extraction) and data augmentation (rotation, blur, brightness shifts) to improve model robustness and facilitated **testing** for optimal performance.
3. Added feature extraction using HOG descriptors and implemented real-time sign detection with OpenCV frame-level inference.
4. **Impact**: Improved classification accuracy and reduced false detections, enhancing reliability for ADAS and autonomous navigation systems.

Potential Projects

- National Level – SIH 2024: Developed an AI-powered Conversational Image Recognition Chatbot using deep learning, computer vision, and NLP to automate image understanding and improve response accuracy and user interaction efficiency.

Certifications

- **IT Specialist – Python (Certiport):** Certified in foundational Python programming. Oct 2023
- **Machine Learning with AI Application – XPLORE IT CORP:** Completed training on machine learning fundamentals and AI applications, including data analysis, model building, and real-world AI implementation.Sep 2024
