ABOUT ME

"Result-driven Electronics enthusiast aspiring to design intelligent IoT ecosystems and embedded solutions. Proven hands-on experience in prototyping with Arduino, integrating smart sensors, and building custom automation systems that bridge the gap between hardware and software."

EDUCATION

2023- 2027 — **BE Electronics and communication Enginnering**
Kongunadu college of enginnering and technology
CGPA: 6.57

2022 - 2023 — **HSC**
Bharathi higher secondary school, Reddipatii
Percentage : 73%

2020 - 2021 — **SSLC**
Sowdambikaa Matric Higher Secondary School

PROJECT

VEHICLE ACCIDENT DETECTION SYSTEM

TOOLS USED: Arduino IDE

A simple accident detective system detects vehicle crashes using basic sensors and sends emergency alerts with location data. It relies on affordable components like an accelerometer, GPS module, microcontroller, and GSM for messaging

DIGITAL HEALTH MONITORING SYSTEM

TOOLS USED: Arduino IDE

To interface heart rate, Peripheral Capillary Oxygen Saturation (SpO2), and temperature sensors with a microcontroller for real-time physiological data collection.

SKILLS

- C
- Java
- Python
- Communication
- Team mangement
- Embbeded
- IoT
- Semiconductor

INTERNSHIP

SMILE TECH 3D

During my internship, I learned how to apply theoretical knowledge to real-world projects. I improved my technical and problem-solving skills, learned to work effectively in a team, managed tasks within deadlines, communicated professionally, and gained a better understanding of workplace culture and industry practices.
