PROJECTS

VISITOR MANAGEMENT SYSTEM

- Developed a web-based Visitor Management System using Java, HTML, CSS, JavaScript, Bootstrap, VSCode, and MySQL. The system helps manage visitor records, check-in/check-out details, and online room visit management efficiently through a user-friendly interface.

FORECASTING KIDNEY HEALTH USING MACHINE LEARNING ALGORITHMS

- The back propagation neural network produces the greatest results, with an accuracy of 99.5% among all other machine learning models. The Flask app is developed for the user convenience to check whether they have a chronic kidney disease or not.
- This project introduces a system for predicting chronic kidney disease using several classifier algorithms. K-Nearest Neighbors, Decision Tree, Random Forest, XgBoost, and Back Propagation Neural Network are the algorithms used for prediction; it has been determined that Back Propagation Neural Network has a higher accuracy rating than the other algorithms.

CO-CURRICULAR ACTIVITIES

- Nptel Certificate completed on Cloud Computing.
