Summary

Data Analyst with hands-on experience in SQL, including joins, subqueries, and window functions, along with strong Excel skills using Pivot Tables and advanced formulas. Practical experience in Power BI, including data modeling, DAX calculations, and interactive dashboard creation. Worked on SQL and Power BI projects for data analysis and reporting, supported by basic Python knowledge.

Internship / Experience

Investment Preference Analysis (Power BI), Cognifyz Technologies, Aug 2025 – Sep 2025

- Planned and implemented interactive dashboards for investment preference analysis, enabling leadership to identify key investor trends across 200+ respondents.
- Performed data cleaning and transformation (removing duplicates, fixing data types, and trimming inconsistencies).
- Developed key DAX measures (e.g., Total Respondents, Male Count, Female Count), enabling precise demographic analysis.

Technical Skills

Data Analysis & BI Tools: Power BI (Data Cleaning, ETL, Business Insights, Data Modeling, DAX Measures, Power Query, KPI Dashboards, Trend Analysis), Microsoft Excel (Pivot Tables, Charts, Advanced Formulas, Data Cleaning)

Databases & Querying: MySQL, SQL (Joins, Subqueries, Window Functions, Aggregations)

Programming Languages: Python (Pandas, NumPy, Matplotlib, Web Scraping)

Data Visualization: Power BI Dashboards, KPI Tracking, Interactive Reports, Tableau (Basic)

Other Tools & Technologies: MS Office, Google Sheets, Git (Version Control), HTML, CSS

Projects

Library Management System (MySQL) GitHub

- Designed and implemented a database-driven system to manage students, books, librarians, and borrowing records.
- Gained hands-on experience with queries, joins, subqueries, aggregations, and database management.
- Ensured data consistency by managing relationships between students, books, and borrowing records.

Customer Service Analysis (Power BI) GitHub

- Enhanced interactive dashboards for Customer Service analytics.
- Built KPIs for ticket volume, agent performance, product-wise support, and knowledge base insights.
- Leveraged DAX and Power BI visuals to improve agent efficiency and reduce ticket resolution time.

Coronary Heart Disease Prediction (Python) GitHub

- Performed data preprocessing and exploratory data analysis on health attributes (age, cholesterol, BMI, blood pressure, etc.).
- Applied and compared multiple ML algorithms (Logistic Regression, SVM) to predict CHD risk levels.
- Achieved high accuracy and interpretability by identifying key health indicators that influence CHD prediction.

Education

Dhanalakshmi Srinivasan Engineering College, B.E. in Computer Science and Engineering Aug 2021 – May 2025

- GPA: 7.6
