DHANUSH KUMAR A

Phone:+91 8778459186 | Email:sarathdhanush3275@gmail.com
Location: Salem, Mecheri – 636451, Tamil Nadu, India
Role: Python Developer | AI & Data Science Graduate

Professional Summary

Motivated Python Developer and Artificial Intelligence & Data Science graduate with hands-on experience in building computer vision applications and web-based solutions. Skilled in Python, Django, OpenCV, HTML, CSS, and JavaScript. Experienced in developing real-time machine learning systems, optimizing application performance, and implementing scalable solutions. Strong problem-solving ability with a passion for AI, automation, and software development.

Technical Skills

- Programming Languages: Python, JavaScript
- Frameworks & Libraries: Django, OpenCV
- Web Technologies: HTML5, CSS3
- Core Areas: Machine Learning, Computer Vision, Web Development
- Tools & Concepts: Git (Basic), REST Concepts, Debugging, Performance Optimization
- UI/UX: Basic interface design and usability principles

Projects

Helmet Detection System – Computer Vision Project

- Developed a real-time Helmet Detection System using Python, OpenCV, and Machine Learning.
- Implemented image processing and object detection techniques to detect riders wearing helmets.
- Integrated the trained ML model with a camera-based monitoring system for live detection.
- Optimized model performance to reduce false positives and improve detection accuracy.
- Designed the system to support automated traffic monitoring and road safety enforcement.

Developed an AI-powered chatbot using Python that can automatically respond to user queries. Implemented keyword-based logic and conversational flow to simulate real-time interaction.

- Designed and developed a Python-based chatbot capable of handling real-time user interactions through automated responses.
- Implemented keyword-driven logic to accurately identify user intent and provide relevant answers.
- Built a conversational flow system to simulate natural human-like communication.
- Optimized response handling to improve speed and efficiency of user query processing.
- Structured the chatbot for scalability, allowing easy integration with web or mobile applications.

Achievements

- Implemented cost-effective technical solutions that reduced project expenses by approximately 20%.
- Improved workflow efficiency by 25% through streamlined development processes.
- Collaborated in delivering engineering projects on time and within the allocated budget.

Education

B.Tech – Artificial Intelligence and Data Science (2021 – 2025) | CGPA: 7.5

Certifications

- Python Programming
- Django Web Development

Languages

- Tamil – Native
- English – Professional Working Proficiency
