KOHITH SANKAR P

Electronics & Communication Engineering Student | Embedded Systems & IoT | Hardware Prototyping | Data Analysis (Python, SQL, Power BI)

Tirunelveli, India | 7598321654 | pkohiths@gmail.com | linkedin.com/in/KohithSankar | github.com/KohithSankar

PROFESSIONAL SUMMARY

Final-year ECE student with hands-on experience in embedded systems and IoT hardware development, including a completed internship in ESP32-based microcontroller programming and sensor integration. Designed and built a real-time voice/Bluetooth-controlled smart wheelchair prototype, combining hardware integration, sensor interfacing, and motor control. Complements core electronics skills with working knowledge of Python, SQL, and Power BI for data-driven problem solving. Seeking a Graduate Engineer Trainee role at L&T to apply strong fundamentals in electronics, embedded systems, and engineering problem-solving to real-world product and process development.

EDUCATION

Government College of Engineering, Salem 2023 - 2027
B.E. Electronics and Communication Engineering | CGPA: 7.76 | Final Year

Keins Matriculation Higher Secondary School, Tirunelveli Mar 2023
Higher Secondary (HSC) | 90.67%

WORK EXPERIENCE

Embedded Systems Intern — Caliber Embedded Technologies, Salem Jun - Jul 2026

- Completed a 1-month internship focused on embedded systems development using ESP32 and Arduino IDE.
- Performed sensor interfacing and hardware integration for microcontroller-based systems.
- Gained practical exposure to embedded firmware development, debugging, and hardware-software integration workflows.

PROJECTS

Smart Voice-Controlled Wheelchair Team Member

- Developed an IoT-enabled smart wheelchair using ESP32, integrating 4+ hardware components for assistive mobility.
- Implemented Bluetooth-based mobile control and real-time obstacle detection using ultrasonic sensors.
- Designed and tested the prototype to validate motor control, sensor integration, and real-time movement response.

Tools: ESP32, Bluetooth, Ultrasonic Sensor, L298N Motor Driver, LCD

Bank Management System Developer

- Built a console-based Bank Management System in Python with 8+ features including secure login, deposits, withdrawals, and transaction history.
- Designed a MySQL relational database with 2 linked tables to manage customer accounts and transactions using SQL CRUD operations.
- Developed a 3-page Power BI dashboard with 10+ visualizations to analyze balances, deposits, withdrawals, and transaction trends.

Tools: Python 3, MySQL, SQL, Power BI

Customer Churn Prediction using Machine Learning Developer

- Built a machine learning model to predict telecom customer churn using Python and Scikit-learn.
- Performed data preprocessing including handling missing values, encoding categorical features, and feature scaling.
- Trained and compared 3 classification models (Logistic Regression, Decision Tree, Random Forest); achieved 81.97% accuracy with Logistic Regression.

Tools: Python 3, Pandas, NumPy, Matplotlib, Scikit-learn, Jupyter Notebook

TECHNICAL SKILLS

Embedded Systems & IoT: ESP32, Arduino IDE, Sensor Interfacing, Motor Control, Bluetooth Integration

Programming Languages: Python, C (Embedded)

Databases: MySQL, MongoDB, SQL

Data Analysis & Visualization: Pandas, NumPy, Power BI, Matplotlib

Machine Learning: Scikit-learn

Tools & Platforms: Jupyter Notebook, MS Word, Arduino IDE

Soft Skills: Communication, Teamwork, Problem Solving, Decision Making, Adaptability

Languages Known: English, Tamil, Hindi

CERTIFICATIONS & TRAINING

Data Science Micro Degree — Imagecon Academy (In Progress): Python, MySQL, MongoDB, Power BI, Data Science using Python, Big Data Analytics, R Programming

WORKSHOPS & ACHIEVEMENTS

Participant, Smart India Hackathon (Internal Round); Workshops in Measuring Instruments and Embedded Systems with IoT
Industrial Visit: CodeBind Technologies
