Objective

Motivated Full Stack Developer and AI enthusiast focused on building scalable, high-performance software solutions. Seeking opportunities to leverage hands-on project experience in backend systems, intelligent applications, and problem solving to deliver impactful, user-centric products while continuously advancing technical expertise.

Technical Skills

Languages: Java (Fundamentals), Python (Fundamentals)
Web: HTML, CSS, JavaScript
AI/ML: Machine Learning, Deep Learning (CNN, ResNet18)
Tools: Git, GitHub, VS Code

Education

Bachelor of Engineering – Computer Science and Engineering 2023 – 2027
Kongunadu College of Engineering and Technology, Namakkal
CGPA: 7.2

HSC (78%) 2022 – 2023
Kalaimagal Matriculation Higher Secondary School

SSLC (All Pass) 2020 – 2021
Kalaimagal Matriculation Higher Secondary School

Achievements

HCL GUVI AI Impact Finalist Top 2% Shortlisted

- Selected among the top 2% teams nationwide for innovative AI solution development.

CMR Finalist Among 1000+ Teams

- Recognized as a finalist among 1000+ participating teams for competitive technical innovation.

Smart India Hackathon (SIH) – Finalist National Level

- Developed a LEO satellite PNT tracking system using Python and real-time TLE data.

Internship

Python & ML Intern – Inspire Softech Solutions Nov – Dec 2024

- Built a mini project applying Machine Learning fundamentals.

AI & ML Intern – Viwise Tech Softwares Nov – Dec 2025

- Gained exposure to AI/ML workflows and use cases.

Projects

Monkeypox Skin Lesion Detection — AI / Deep Learning

- CNN-based classification model using ResNet18.

Portfolio Website — HTML, CSS, JavaScript

- Responsive website designed, developed, and deployed using a custom domain.

LEO Satellite Visibility & TLE Filtering System — Python, Flask, HTML, JavaScript

- Developed a full-stack system that filters and displays visible LEO satellites for a given location using TLE data and SGP4 propagation.

AI-Generated Voice Detection System — Python, Machine Learning, Deep Learning, CNN, FastAPI

- Built a machine learning and deep learning-based system to detect AI-generated vs real speech using log-mel spectrogram features, achieving 99% validation accuracy with API-based deployment.

Certification

Frontend Development Essentials – CodeKaro (HTML, CSS, JavaScript)

Generative AI & GPT Models – Infosys (Generative Models, GPT Models, GPT-3, Prompt Engineering, CSS Fundamentals)

IT Career Forge Workshop – Gained industry-oriented insights on IT career pathways, skill development, and professional readiness.(PSG COLLEGE)

Interests

Artificial intelligence, full-stack development, fitness, and continuous self-improvement.

Communication

- Tamil
- English
