## PROFESSIONAL SUMMARY

Full Stack Developer with hands-on training in Python (Django), JavaScript (React.js), Node.js/Express.js, and SQL databases (Oracle SQL, MySQL). Currently building production-style CRUD applications and REST APIs during a Python Full Stack Developer internship at QSpiders, alongside independent projects spanning web development and IoT. Comfortable across the stack — from responsive UI in React to backend API design and relational database integration — with a track record of shipping working applications from concept to deployment.

## TECHNICAL SKILLS

- Languages/Frameworks: Python, Django, JavaScript, React.js, Node.js, Express.js
- Frontend: HTML5, CSS3, React.js, Responsive Design
- Databases: Oracle SQL, MySQL
- Tools: Git, GitHub, VS Code, Postman
- Concepts: OOP, CRUD Operations, REST APIs, MVC/MVT Architecture

## INTERNSHIP EXPERIENCE

**Python Full Stack Developer Intern — QSpiders** *Ongoing*

- Building full-stack web applications using Python, Django, JavaScript, and MySQL as part of an intensive hands-on training program
- Implementing CRUD operations and RESTful APIs within Django, connecting backend logic to MySQL for persistent data storage
- Testing and validating API endpoints using Postman to verify request/response behavior before frontend integration
- Developing responsive front-end interfaces to consume backend APIs, applying component-based UI structuring principles

## PROJECTS

**Book Vault — Full-Stack Book Management System**

*React.js, Node.js, Express.js, Oracle SQL*

- Built a full-stack Book Management System implementing complete CRUD functionality — add, view, update, and delete book records
- Developed RESTful API endpoints connecting the Express.js backend to an Oracle SQL database for persistent, structured data storage
- Designed a responsive, component-based UI in React.js for browsing and managing the book catalog across devices

**Automatic Sunlight Tracking System — IoT**

*Arduino Uno, ESP32, LDR Sensors, Servo Motors*

- Designed and built an IoT-based solar tracking system that dynamically adjusts panel angle in real time using differential LDR sensor readings
- Implemented closed-loop control logic to drive servo positioning, replacing static panel orientation with adaptive tracking
- Integrated ESP32 for remote monitoring, transmitting live sensor and position data over Wi-Fi

## EDUCATION

**B.E. Electronics and Communication Engineering — Sona College of Technology, Salem** *2022 – 2026*

*CGPA: 7.4*

**Higher Secondary Education — Salem Sri Sowdeswari Matriculation Higher Secondary School** *2022*

*78%*

**Secondary Education — Salem Sri Sowdeswari Matriculation Higher Secondary School** *2020*

*75%*

## CERTIFICATIONS

- Internet of Things — NPTEL
- Java Programming — Livewire Institute
